        STEP OF NITRATE ASSIMILATION IN PLANTS, FUNGI AND BACTERIA.

CATALYTIC ACTIVITY: NADPH + nitrate = NADP(+) + nitrite + H(2)O.

COFACTOR: EACH SUBUNIT CONTAINS 1 EQUIVALENT OF FAD, HEME IRON,
AND MOLYBDENUM-PTERIN AS PROSTHETIC GROUPS. THE HEME GROUP IS

CALLED CYTOCHROME B-557.

PATHMAY: NITRATE ASSIMILATORY PATHWAY.

SUBUNIT: HOMODIMER.

INDUCTION: ITS EXPRESSION IS HIGHLY REGULATED AND RESPONDS RAPIDLY
TO NITRATE INDUCTION AND TO NITROGEN REPRESSION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MLKIWNLNKFTGVIGAFN 93

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches 101;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                           The present invention describes a raffinose synthase, having an activity of forming raffinose from sucrose and galactinol. The raffinose synthase gene can be used for expression in a plant for the production of raffinose. The raffinose synthase can give raffinose from sucrose and galactinol efficiently. The present sequence represents raffinose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is cucumber raffinose synthase, which forms raffinose from sucrose and galactinol, has an optimum pH of 6 to 8 and working temperature of 35 to 40 degrees C, has a molecular weight of 75 to 95 kDa by gel filtration or 90 to 100 kDa by PAGE and SDS-PAGE under reductive conditions and is inhibited by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 1999-340516/29.
